

Metropol_E – A mobility guide

Project management: Prof. Dr. Harald Rau

Summary: With the help of an interactive e-Mobility guide, the first stage will explore tourist and other significant destinations in the context of the existing quick-charging stations. The municipalities from the metropolitan region are also involved in the project, in order to integrate their information and interests and identify possible further locations for charging stations. The results of the research project will be integrated into, amongst other things, an information offering, the e-Mobility guide, which uses various communication channels. The guide is to contain customisable tours across the charging infrastructure, and display tourist, scientific and economic highlights in the area around the respective charging station.

Funding: State-level funding
Metropolitan region, Office for Regional Development of Lower Saxony, Leine-Weser

Duration: 2016 – 2018

Funding amount: €25,000

Organisational unit: Faculty of Transport-Sports-Tourism-Media

Research area: Social Perspectives of Change
