

Security Reference Model Industry 4.0 – SecuRIn

Project management: Prof. Dr. Ina Schiering

Summary: According to the industry association BITKOM, 69 percent of businesses are planning process improvements through Industry 4.0. The lack of IT security to date is the most important obstacle on this path. At the same time, digitization with Industry 4.0 offers the opportunity for significant innovations. The question is: how can innovative solutions in Industry 4.0 be structured safely?

This is the highly topical issue on which scientists and researchers from the fields of computer science, social work and electrical engineering at Ostfalia University of Applied Sciences are working in an interdisciplinary manner. They are also collaborating with companies and social institutions in the region.

Funding: State-level funding
Niedersächsisches Vorab

Duration: 2016 – 2021

Funding amount: €995,158

Organisational unit: Faculty of Computer Science/IT

Research area: Digitization and Industry 4.0
